EXPERIENCE

Project Intern (AR/VR) | IITI Drishti CPS Foundation, IIT Indore

Jun, 2026 - Present

- Analyzed client deliverables to architect performance-conscious AR/VR simulation systems within tight device constraints.
- Optimized scene performance through static batching and texture compression, boosting runtime performance by 40% and cutting draw calls by over 50%.
- Implemented frustum and occlusion culling across simulation environments, cutting runtime triangle counts by more than 50%.
- Engineered custom C# systems for OpenXR hand-grab mechanics and locomotion, maintaining frame budgets through continuous profiling.

Software Developer | Sorxn LLP

Jan, 2026 - Jun, 2026

- Built a self-hosted backend infrastructure prototype (REST APIs, PostgreSQL, Linux/Cloudflare tunnel routing) replacing Supabase, sustaining 150+ concurrent requests before production handoff.
- Developed a full-stack internal platform (Next.js, Supabase) with JWT-based authentication and role-based access control, enforced across every system layer.

Software Developer Intern | Sorxn LLP

Dec, 2025 - Jan, 2026

- Contributed features across internal systems and the company's public website in Next.js, through to production readiness.
- Owned end-to-end production deployment (DNS, environment config, go-live) for the company website.

Jr. Unity Developer | Vighnesh Inc.

Jun, 2024 - Dec, 2025

- Replaced a third-party SDK with a hand-rolled Firebase Auth/Firestore REST layer, achieving full WebGL compatibility.
- Designed a UI state management system spanning 500+ screens across 20+ modules, eliminating a class of runtime bugs.
- Built a custom scene lifecycle manager for 10+ additive scenes, cutting memory overhead and latency by more than 50%.

Software Developer Intern | Vighnesh Inc.

May, 2023 - Jan, 2024

- Built backend-integrated PHP modules for server-side request handling tied to real-time XR simulation state.
- Ported a Pre-Flight Check simulation from PC VR (HTC Vive) to standalone VR (Meta Quest Pro), resolving rendering bottlenecks to sustain stable frame rates.
- Coordinated with 3D artists, designers and QA team in formal technical reviews, flagging geometry-heavy assets causing draw call spikes and resolving issues via whitebox code testing.

PROJECTS

Unearth | [Website](#) | [GitHub](#) | Python

Aug, 2025 - Present

- Built a digital forensics platform for low-level filesystem parsing, deleted-data recovery, and signature-based artifact reconstruction with zero external forensic dependencies.
- Engineered automated evidence pipelines (SHA-256 verification, metadata extraction, timeline reconstruction) for structured forensic investigation.
- Delivered CLI and GUI interfaces for technical and operational users, reducing tool-switching overhead.

SerenitySphere | [GitHub](#) | Unity, C#, OpenXR, XR Interaction Toolkit

Oct, 2024 - Mar, 2025

- Developed a VR meditation environment on Meta Quest 3, balancing high-fidelity URP scene design against runtime constraints.
- Optimized rendering (occlusion culling, GPU profiling) for stable frame rates; added proximity-based spatial audio.
- Selected as a Top 40 Finalist in the XR Creator Hackathon under the WAVES Create in India Challenge, Season 1, organized by the Ministry of Information and Broadcasting, Government of India; presented at the grand finale at Jio World Centre, Mumbai.

AR Application: HomewiseVision | [Website](#) | [GitHub](#) | [Research Paper](#) | Unity, Firebase, C#, Python, Vuforia Engine

Jan, 2024 - Apr, 2025

- Built a mobile AR app for iPad with Firebase-backed authentication, cloud sync, and session-persistent state management.
- Designed backend-connected data handling, enabling scalable deployment across Android targets without architecture rework.
- Explored cost estimation via Multiple Linear Regression and dynamic model generation using Apple RoomPlan API.
- Published in IRJET (Vol. 11, Issue 2); awarded 1st Place at AI SPARK 2025, Judges' Choice award at U'LECTRO 2025, and placed at two additional collegiate competitions.

EDUCATION

NYSS's Datta Meghe College of Engineering

Sept, 2024 - Expected May, 2027

B.E in Artificial Intelligence and Data Science - 8.48 CGPA | Navi Mumbai, India

Zagdu Singh Charitable Trust's Thakur Polytechnic

Oct, 2021 - Jun, 2024

Diploma in Computer Engineering - 86.97% | Mumbai, India

SKILLS

- Programming Languages: C#, Python, SQL
- Frameworks and Tools: Unity, AR Foundation, Vuforia Engine, OpenXR, XR Interaction Toolkit, Meta XR SDK, Microsoft MRTK, Scriptable Objects, Firebase, Supabase, Linux, Cloudflare, FastAPI, Git & GitHub
- Concepts: Project Coordination, Real-Time Rendering Fundamentals, Spatial Computing & Coordinate Systems, Memory Management & Object Lifecycle, Device Constraints & Runtime Optimization, Simulation-Based System Design, REST API Design & Integration, LLM Integration, Asynchronous Programming, OOP, JWT Authentication, RBAC
